

# Video Conferencing

Interactive distance learning, trainings and private conference sessions via two-way audio and video transmissions

# Video Conferencing

Interactive distance learning, trainings and private conference sessions via two-way audio and video transmissions

## Benefits:

- Enables client/server-based video conferencing
- Supports standard H323 for VoIP and T.120 for document/application sharing
- Flexible data speeds ranging up to 5 Mbps receive and 4 Mbps transmit\*
- Allows either point-to-point or point-to-multipoint setup

\* Maximum throughput is not applicable for simultaneous download and upload. Maximum throughput for simultaneous download and upload is 4 Mbps receive and 2 Mbps transmit.
